Neritic Carbonate Sediments in a Temperate Realm: Southern Australia Noel P. James, Yvonne Bone

This book is the first comprehensive documentation and interpretation of modern neritic carbonate sediments on the southern Australian continental margin, the largest cool-water carbonate depositional system on the globe. The approach is classical but the information is new. A brief chapter of introduction is followed by a section that describes the setting of the continental margin in terms of the regional geology, its evolution through time, the climate, and the complex oceanography. The setting is further explored in chapter 3 that outlines the Pleistocene history of sedimentation in this region. This is particularly important since many of the surficial sediments have a partial older history. The following section on the carbonate factory describes in detail the nature of the animals and plants that determine the nature of the sediments and the environmental conditions that control their distribution. The shelf itself cannot be discussed in isolation and thus a short chapter on the marginal marine environment is presented. The core of the book comprises two chapters that document the suite of depositional facies and their composition and then the suite of depositional environments where these sediments are found. The variety of deposits in this vast area is such that three chapters are devoted to the character of the materials on the southwestern shelf the south Australian sea and the southeastern shelf. The diagenesis that affects these sediments is tackled in a chapter after all the attributes are documented because they are intimately linked to different controls. The book finishes with a summary chapter that also addresses the various controls on sedimentation and models the effects to be expected when these are changed outside those present in the current realm.

Audience: The book is an invaluable source of information about this vast region and will be a critical reference for researchers, graduate students, and professionals engaged in marine and environmental research. It will be of particular importance for geologists interpreting the ancient rock record.

From reader reviews:

Frances Williamson:

This Neritic Carbonate Sediments in a Temperate Realm: Southern Australia book is absolutely not ordinary book, you have after that it the world is in your hands. The benefit you get by reading this book is actually information inside this e-book incredible fresh, you will get info which is getting deeper you actually read a lot of information you will get. This Neritic Carbonate Sediments in a Temperate Realm: Southern Australia without we recognize teach the one who studying it become critical in imagining and analyzing. Don't be worry Neritic Carbonate Sediments in a Temperate Realm: Southern Australia can bring when you are and not make your handbag space or bookshelves' come to be full because you can have it inside your lovely laptop even cellphone. This Neritic Carbonate Sediments in a Temperate Realm: Southern Australia having excellent arrangement in word along with layout, so you will not really feel uninterested in reading.

Joshua Bush:

Do you among people who can't read pleasurable if the sentence chained in the straightway, hold on guys this particular aren't like that. This Neritic Carbonate Sediments in a Temperate Realm: Southern Australia book is readable through you who hate those straight word style. You will find the facts here are arrange for enjoyable examining experience without leaving actually decrease the knowledge that want to offer to you. The writer involving Neritic Carbonate Sediments in a Temperate Realm: Southern Australia content conveys objective easily to understand by many people. The printed and e-book are not different in the information but it just different available as it. So , do you nonetheless thinking Neritic Carbonate Sediments in a Temperate Realm: Southern Australia is not loveable to be your top record reading book?

Elaine West:

Spent a free time for you to be fun activity to perform! A lot of people spent their leisure time with their family, or their friends. Usually they doing activity like watching television, gonna beach, or picnic from the park. They actually doing same task every week. Do you feel it? Will you something different to fill your free time/ holiday? Could possibly be reading a book can be option to fill your free of charge time/ holiday. The first thing you ask may be what kinds of reserve that you should read. If you want to test look for book, may be the reserve untitled Neritic Carbonate Sediments in a Temperate Realm: Southern Australia can be good book to read. May be it can be best activity to you.

John Cheung:

Many people spending their time by playing outside together with friends, fun activity together with family or just watching TV all day long. You can have new activity to pay your whole day by studying a book. Ugh, think reading a book can really hard because you have to use the book everywhere? It alright you can have the e-book, having everywhere you want in your Mobile phone. Like Neritic Carbonate Sediments in a Temperate Realm: Southern Australia which is keeping the e-book version. So , try out this book? Let's

notice.
