Masted Structures in Architecture (Butterworth Architecture New Technology Series) James Harris, Kevin Li

This is the first fully comprehensive survey and analysis of masted structures and covers examples that have evolved during the past three decades.

Masted Structures are one of the most interesting developments in post-war architecture resulting from a combination of technology, structural engineering theory and a collaboration between architects and engineers.

This is an essential guide for architects to the structural and constructional implications of masted forms in relation to space enclosure, patterns of loading and use of differing materials and techniques. This useful volume will enable architects and engineers to understand the origins, development and nature of masted structures and will provide a stimulating basis for future design.
